Jeffrey Yu
07/23/2026

99% Renewable Electricity

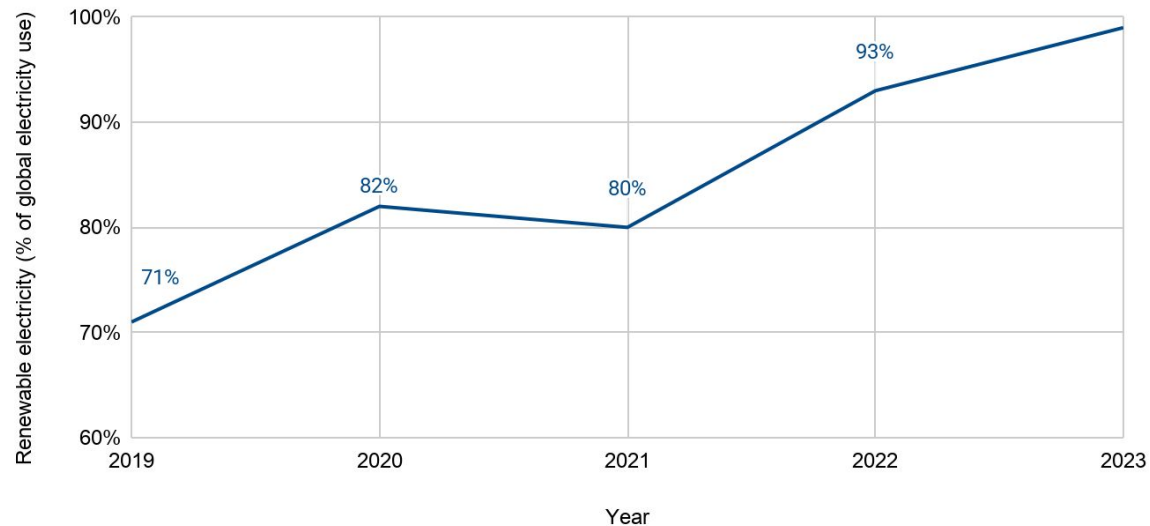

In **five years**, Intel took global renewable electricity use from **71% to 99%**, nearly powering the entire company on clean energy, with full 100% already reached across the U.S., Israel, Malaysia, Vietnam, and China.

Put Into Perspective:

That 28–point jump is roughly equivalent to switching over **900,000 average U.S. homes** from grid power to **100% clean electricity**.

Global Renewable Electricity Use, 2019–2023

Returning A Favor

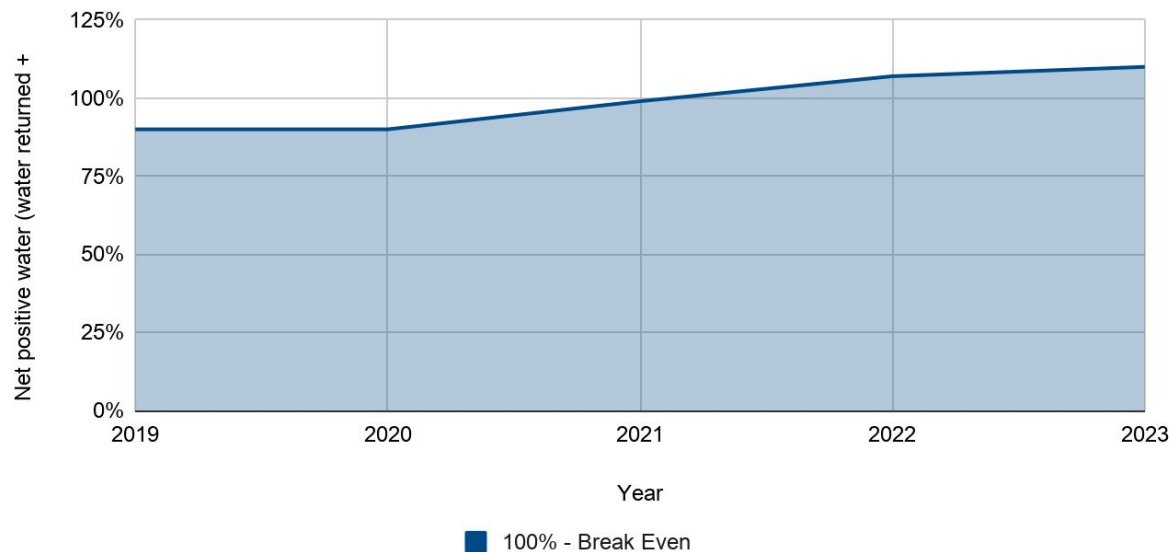

Intel has now reached **110% net positive water globally**. For every 10 gallons used in operations, more than 11 are returned or restored to local watersheds.

Put Into Perspective:

The 10.2 billion gallons Intel conserved in 2023 alone would fill more than **15,000 Olympic sized swimming pools**.

Net Positive Water Progress, 2019–2023

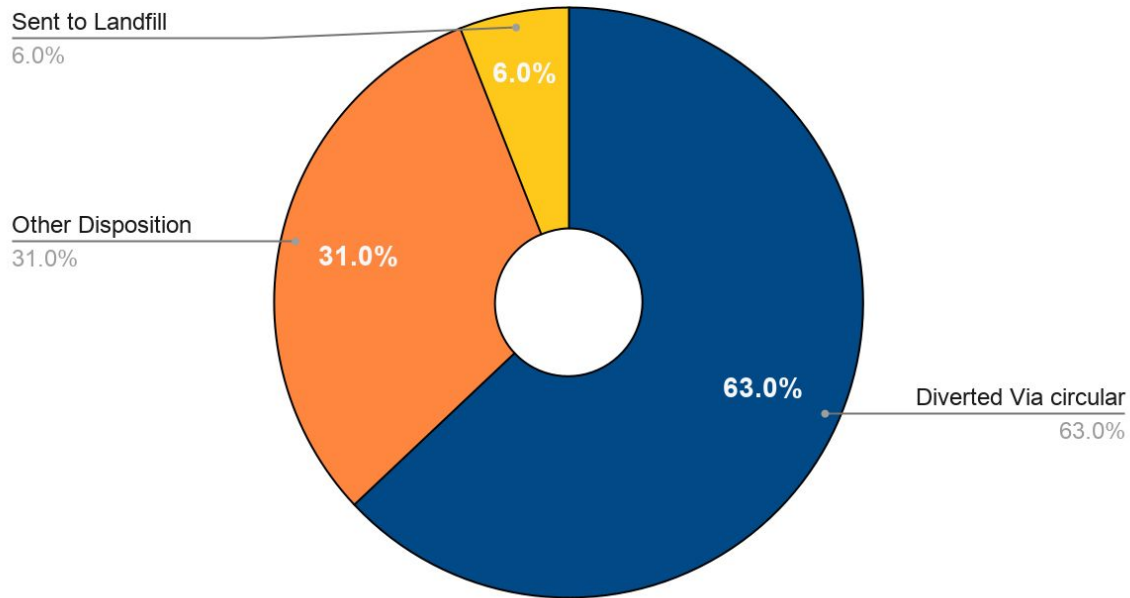

Waste Into Opportunity

Intel diverted **63%** of manufacturing waste, about **75,800 tons**, back into circular use in 2023, keeping landfills to just **6% of total waste** generated.

Put Into Perspective:

75,800 tons is close to the weight of **190,000 pickup trucks** pushed away from landfills and reused.

2023 Manufacturing Waste Outcomes

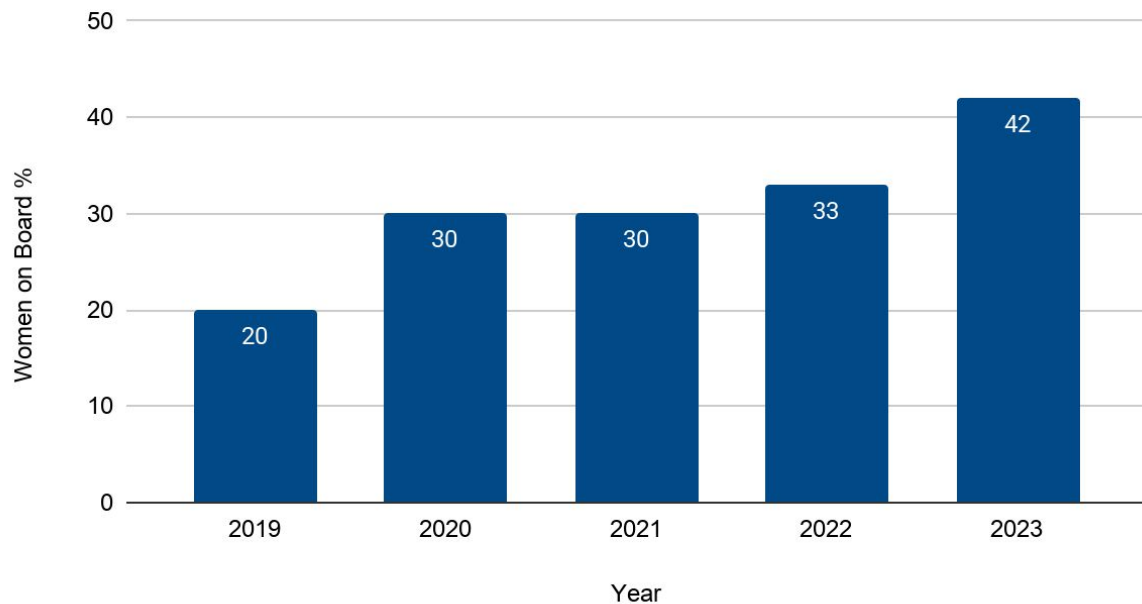

Doubling Representation

Women now hold **42%** of Intel's Board seats in 2023, **more than doubling from 20%** in 2019.

Put Into Perspective:

If Intel's Board had 12 seats in 2019, only 2 would have been held by women. At today's 42%, that's 5, with the trend still climbing.

Women on Intel's Board, 2019–2023

100% Renewable in 5+ Countries

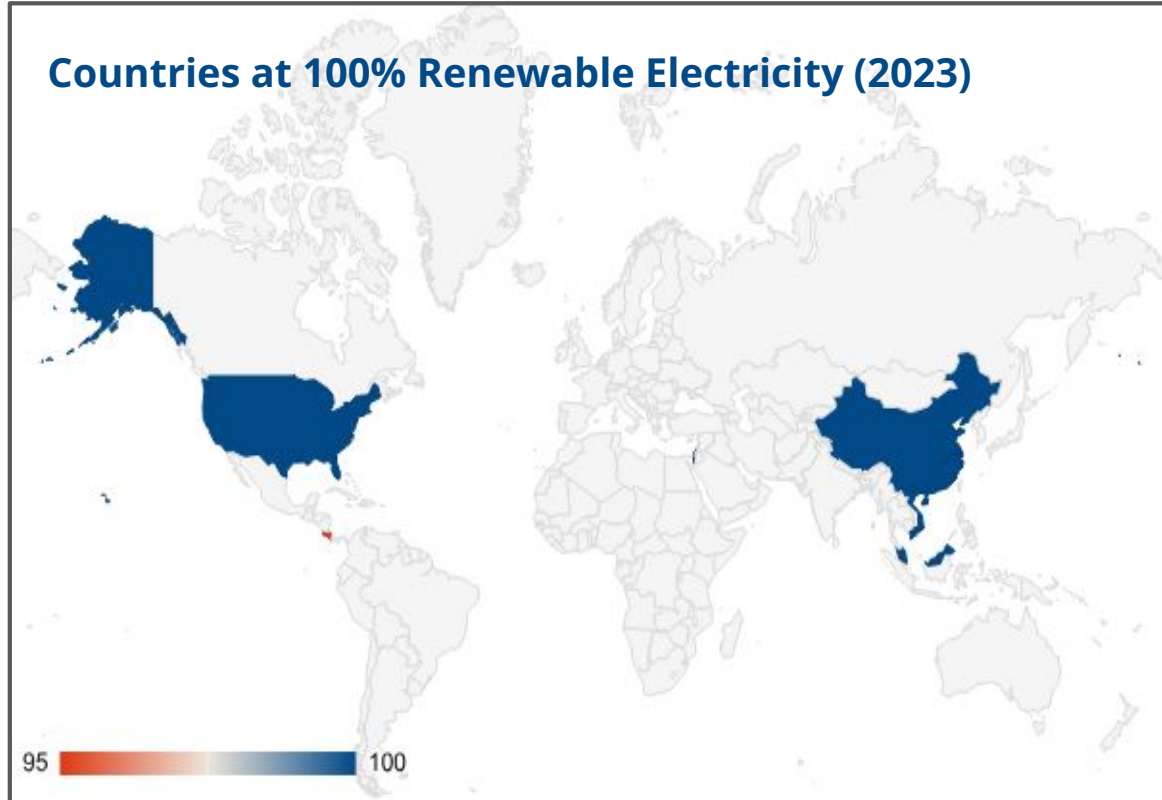

intel.

Full 100% renewable electricity has already been reached in the U.S., Israel, Malaysia, Vietnam, and China, with Costa Rica close behind at 95% and climbing.

Put Into Perspective:

These five countries represent operations across three continents, showing that full decarbonization isn't limited to one region or one type of energy grid. In fact, it's already working in very different regulatory and geographic environments at once.

Countries at 100% Renewable Electricity (2023)

US, Israel, Malaysia, Vietnam, China: 100%. Costa Rica: 95%. Color scale: 95% to 100% renewable electricity.
